

Environmental Policy Statement
Water Services and Environment Section

This is the Monaghan County Council's Water Services and Environment Sections' policy with respect to ISO 14001. We aim to be an Environmental Leader for the County and will actively strive to enhance our local environment, improve the health and well being of our local community and reduce the negative impact that we have on our environment year on year.

Environmental Performance

Monaghan County Council's Water Services and Environment Sections are committed to continual improvement and prevention of pollution by reducing the environmental impacts that arise from our business activities and delivery of our services.

Through the implementation of an Environmental Management System we will:

- Set realistic and measurable objectives and targets together with an Environmental Management Programme to ensure continual improvement in environmental performance.
- Regularly review the policy through management review to ensure it continues to be effective and representative of the Sections activities and services.
- Endeavour to:
 - Minimise the amount of waste generated internally and disposed of to landfill. Where reduction is not practicable, seek to reuse or recycle waste and ensure the safe disposal of all waste.
 - Introduce measures to ensure best practice and the responsible use of natural resources such as water, fuel and energy where possible.
 - Investigate and introduce measures to minimise the release of pollutants, which cause damage to land, air and water due to the departments' activities where possible.
 - Reduce the environmental impact of goods purchased whilst at the same time encouraging suppliers and contracted services to improve their environmental performance.

Legal Requirements

The Water Services and Environment Sections make the commitment to comply fully and where possible exceed the requirements of applicable legislation and regulations and any other environmental requirements through the application of Best Practice techniques.

Communication

This policy shall be communicated, understood and practised by all our staff. We shall raise awareness of the EMS Policy and sustainability issues among all those working for or on behalf of the departments through appropriate training and dissemination of information.

We will strive to consult with and educate local people on the principles of Sustainable Development, so that the quality of life in the County can be maintained and enhanced where possible

The Department will address environmental issues in an open manner and maintain close links with relevant authorities, regulatory agencies, research institutes and the local community to improve and protect our local and global environment.

We will ensure the Council's Water Services and Environment Sections' Policy is readily available to the public.
