

# N2 CLONTIBRET TO NORTHERN IRELAND BORDER ROAD SCHEME

## Constraints Study Report

The initial step in the Route Selection Process is to identify the nature and extent of significant constraints within a defined Study Area. The Study Area is the area bounded by the red line on the display maps. It represents the area which has been considered to allow for the identification and development of the feasible Route Options, whilst avoiding such constraints where possible.

Following on from the first public consultation held in July 2009 for the Constraints Study, the findings of the study have been documented and mapped in the Constraints Study Report which was published in March 2010.

A number of the constraints identified during the study are on display at this public consultation. For further information, the Constraints Study Report is available for viewing at the offices of Monaghan County Council at the following address:

Roads Department,  
Mtek 2 Building,  
Knockaconny,  
Monaghan,  
Co. Monaghan
